Hong Kong Update

May 2023

What is the EU Digital COVID Certificate?

An EU Digital COVID Certificate is a digital proof that a person has either

- ✓ been vaccinated against COVID-19
- ✓ received a negative test result or
- ✓ recovered from COVID-19

National authorities are in charge of issuing the certificate. It could, for example, be issued by test centres or health authorities, or directly via an eHealth portal.

- ✓ Vaccination certificates are issued by the Member State where the vaccination has been administered.
- ✓ Test certificates are issued by the Member State where the test has taken place.
- ✓ Recovery certificates are issued by the Member State where the recovered person is located.

# Apply for EU DCC mechanism-compatible records

Members of public in Hong Kong **who hold valid local vaccination / testing / recovery records** can download relevant records from the COVID-19 Electronic Vaccination and Testing Record System (eVT System) or **through the "iAM Smart" mobile application**. In order to authenticate the user's identity, the user has to enter personal information such as Hong Kong Identity Card number, passport number and other data required by the system. As an alternative, members of public can also **download the relevant records via iAM Smart**. Besides, the certificate can be downloaded in PDF format and printed out for travel purposes.

The records contain necessary information such as name, date of birth and your local vaccination / testing / recovery records. Besides**, the records also include a unique digital identifier as well as a digital signature to ensure that the records are authentic.**
